(54) Title: VOLATILE LIQUID DISSEMINATING DEVICE

(57) Abstract: An apparatus for disseminating a volatile liquid, such as a fragrance, into an atmosphere from a reservoir (1), dissemination being achieved by means of a transfer member (2) in contact with the liquid and a capillary member in liquid transfer contact with the transfer member. The capillary member comprises an evaporating surface (3) bearing primary capillary channels, at least some of these primary capillary channels being intersected by at least one secondary capillary channel, the secondary capillary channel being substantially smaller in cross-sectional area than that of the primary channels, such that liquid will flow in both primary and secondary channels.
